HTML Review

What are elements, tags, and attributes?

An **Element** defines the structure and content of objects within a page.

They are found inside < > brackets.

Common elements

<h1> to <h6>, <a>, <div>, <span>, <strong>, <em>

Tags surround elements

An opening tag mark the beginning of the element.
<h1>

A closing tag marks the end
</h1>

Attributes provide additional info about an element.

Examples include: *id, href, src*

<a href="http://ytmnd.com">

Self-closing elements

<img>
 <embed>
(and some others, less frequently used)

What is the bare minimum needed to make a webpage?

```html
<!DOCTYPE html>
<html>
  <head>
  </head>
  <body>
    Hello world.
  </body>
</html>
```
